

# Tip Sheet: Sharing with Tableau Public

---

Tableau Public is a way to disseminate your work in Tableau. Some have even used their Tableau Public profile in their job search process as a way to demonstrate their skills.

**But** everything posted to Tableau Public is publicly available, including the underlying data! So this is **not** an appropriate place to post any proprietary or sensitive data. But it can be great to publicize your work.

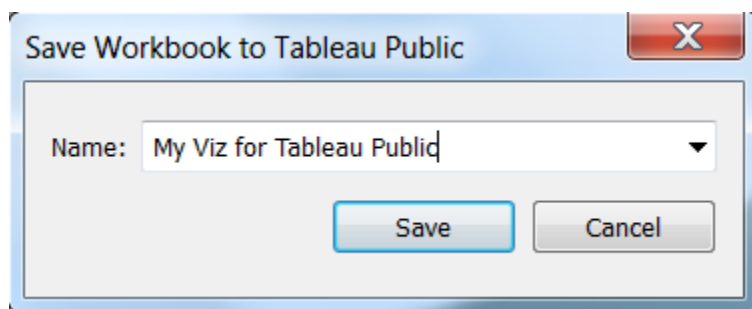

## Sharing with Tableau Public

The easiest way to get started with Tableau Public is from within Tableau itself:

- Open a Tableau viz that you would like to share on Tableau Public (you can always hide or delete it later)
- Click the **Server** drop-down...**Tableau Public**...**Save to Tableau Public As...**
- To create a Tableau Public Account, just click **Create one now for free**:

A screenshot of the 'Tableau Public Sign In' dialog box. The title bar says 'Tableau Public Sign In' with a close button. The main area features the 'tableau public' logo at the top. Below the logo are two input fields: 'Email address' and 'Password'. Under these fields is an orange 'Sign in' button. At the bottom, there are three links: 'Forgot your password?', 'Don't have a profile yet?', and 'Create one now for free'.

Once you have set up your account, you can sign in. Then you will see this screen:

A screenshot of the 'Save Workbook to Tableau Public' dialog box. The title bar says 'Save Workbook to Tableau Public' with a close button. The main area has a 'Name:' label followed by a text box containing 'My Viz for Tableau Public' and a dropdown arrow. At the bottom are two buttons: 'Save' and 'Cancel'.

Simply type in a name for your viz and click Save

You will automatically be taken to your Tableau Public page, where you can see your posted viz. You're done!

- You can make a viz invisible to others by going to Profile and clicking the upper-right corner of the viz:

- When you hover over each viz in your profile, you should also see a delete icon in the lower-right.
